Wireless IRC for the Nokia 7650

By: **Jørgen Sundgot**, Tuesday 12th November 2002 13:44 GMT

Germany-based mobileways has now released version 1.52 of WirelessIRC, an application which lets Nokia 7650 owners connect to IRC networks to chat and share files by means of DCC.

Although their role has been more or less replaced by Instant Messaging, IRC networks are still preferred by many Internet users as a chat medium. Now, owners of the Nokia 7650 can stay in touch with their IRC buddies even when they're out and about, thanks to WirelessIRC from Germany-based **mobileways**. Now in version 1.52, the client offers DCC send/receive capabilities.

As an IRC client, WirelessIRC allows users to connect to Internet Relay Chat (IRC) networks all over the world, where they can chat with thousands of other people that have connected either via PCs, mobile phones or handhelds. WirelessIRC provides menu shortcuts to most common IRC commands, and with version 1.52 offers users the option to send and receive files by means of a DCC relay proxy. Possible applications include taking a picture or recording a voice note, for then to send it to another person on the network.

FROM HARDWAR

Nokia 7700
Based on Symbian OS and Nokia's own Series 90 platform, the Nokia 7700 features a high-resolution, landscape touchscreen and a vast range of advanced technologies.
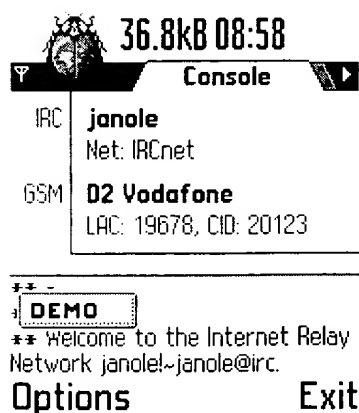

Sony Ericsson P900
Following numerous leaks, Sony Ericsson has finally - and officially - taken the wraps off its P900 model, the long-anticipated successor to the P800 wireless handheld.

Sendo X
Following much ado over the company's Microsoft-to-Nokia smartphone platform switcheroo, the first smartphone from British manufacturer Sendo has finally been announced.

Nokia 6600
Nokia's new Series 60-based 6600 model is the most advanced product yet to be launched by the company, featuring tri-band GSM, GPRS,

Value Added Services & Mobile Gimmicks

This website is dedicated to wireless data applications. The main interest is to promote the new standard for wireless information in mobile phone networks, WAP.

If you are interested in mobile Value Added Services, then please have a look at the WAP Gateway.
This product prepares almost any WebSite for mobile devices, which conform to the WAP standard.

There are two little gimmicks available on this site:
A Ringtone Composer and an Operator Logo Editor for Nokia Mobile Phones.
